

2009 PAA-KO COMMUNITIES MOISTURE REPORT

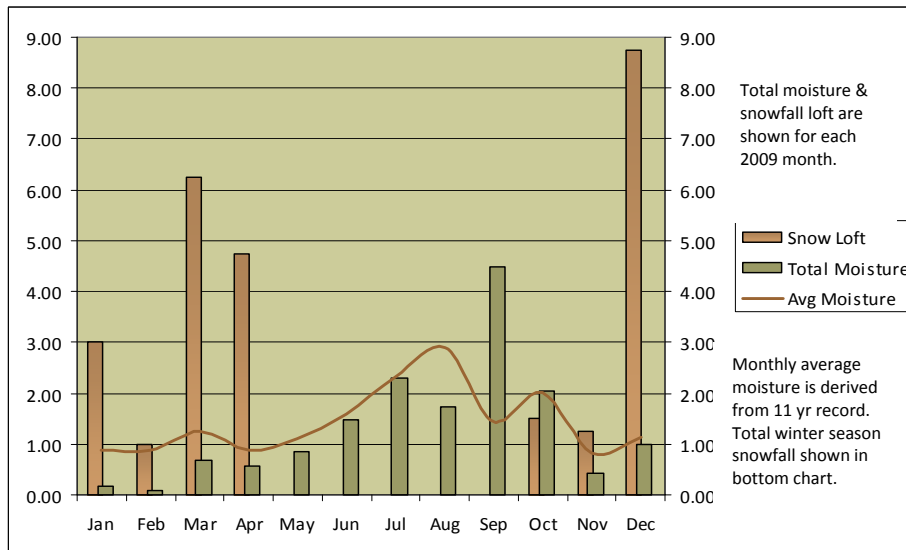

The usual sections are included in the annual Paa-Ko Communities moisture report along with a new chart comparing snow loft w/total monthly moisture. Snow depth was first measured for loft in the weather gauge before being melted for moisture content. The entire process is manual and, as Paa-Ko moisture amounts vary across the development, you should consider this moisture information as merely representative of what is seen in this East Mountain area.

Paa-Ko Moisture Almanac

Paa-Ko 2009 total recorded moisture	15.83 inches
